## PureCube Co-NTA MagBeads

| Product | Catalog No. | Package size |
| :--- | :---: | :---: |
| PureCube Co-NTA MagBeads $(1 \mathrm{~mL})$ | 31501 | $1 \times 1 \mathrm{~mL}$ |
| PureCube Co-NTA MagBeads $(5 \mathrm{~mL})$ | 31505 | $1 \times 5 \mathrm{~mL}$ |
| PureCube Co-NTA MagBeads $(25 \mathrm{~mL})$ | 31525 | $1 \times 25 \mathrm{~mL}$ |
| PureCube Co-NTA MagBeads $(4 \times 25 \mathrm{~mL})$ | 31590 | $4 \times 25 \mathrm{~mL}$ |

## Product Description

PureCube Co-NTA MagBeads were developed for the affinity purification of proteins carrying a polyhistidine tag. The affinity matrix is based on spherical magnetic agarose beads, consisting of $6 \%$ cross-linked agarose. The material is highly porous to allow optimal protein interaction. Cross-linked agarose is also physically very stable, making it suitable for purification processes without deformation or destruction. Our magnetic beads are very homogeneous in size with a medium particle diameter of $30 \mu \mathrm{~m}$, yielding a high degree of reproducibility between individual purification runs.

An NTA ligand is coupled to the agarose and carefully loaded with cobalt ions to obtain a matrix with highest binding capacity for histidine residues. The metal ion capacity is $>12 \mu \mathrm{eqv} \mathrm{Co}^{2+} / \mathrm{mL}$. Other possible metal ions are $\mathrm{Ni}^{2+}, \mathrm{Zn}^{2+}, \mathrm{Fe}^{3+}, \mathrm{Al}^{3+}$, and $\mathrm{Cu}^{2+}$ resulting in different affinities, e.g. for zinc-finger proteins or phosphorylated proteins. If required, the cobalt ions can be removed from the magnetic beads using 5 wash steps with 100 mM EDTA, and the magnetic beads can be recharged with a different metal ion. Alternatively, please contact us for unloaded PureCube NTA magnetic beads.

PureCube Co-NTA MagBeads are delivered as a $25 \%$ suspension. Therefore, 1 mL suspension will yield a $250 \mu \mathrm{~L}$ bed volume. The suspension contains $20 \%$ ethanol to prevent microbial growth.

## Protein Binding Capacity

The protein binding capacity is 30 mg protein per mL of settled beads, as determined by purification of $6 x H i s-t a g g e d ~ G F P ~ p r o t e i n ~ f r o m ~ E . c o l i ~ c l e a r e d ~ l y s a t e s, ~ a n d ~ q u a n t i f i e d ~ v i a ~ s p e c t r o p h o t o m e t r y . ~$

## Compatitibility

PureCube Co-NTA MagBeads are very stable and can resist the following conditions in most situations: pH 2-4, 100\% methanol, $100 \%$ ethanol, 8 M urea, 6 M guanidinium hydrochloride, $30 \%$ ( $\mathrm{v} / \mathrm{v}$ ) acetonitrile.

## Shipping \& Storage

| Shipment Temperature | Ambient temperature |
| :--- | :--- |
| Short-term Storage | In neutral buffer at $4^{\circ} \mathrm{C}$ |
| Long-term Storage | In neutral buffer with $20 \%$ ethanol at $4^{\circ} \mathrm{C}$ |

## Additional Information

For protein purification protocols, please visit our webpage at: www.cube-biotech.com/protocols. For purification of his-tagged proteins with gravity flow columns and low pressure chromatography, we recommend using PureCube Co-NTA Agarose. For affinity purification of GST-tagged, rho-tagged or strep ${ }^{\circledR}$-tagged proteins, Cube Biotech offers dedicated agarose resins, magnetic beads and prepacked cartridges. Also available are a range of ultrapure detergents and buffers for extraction and purification of proteins. See www.cube-biotech.com/products for details.

Disclaimer: Our products are intended for molecular biology applications. These products are not intended for the diagnosis, prevention, or treatment of a disease.

Trademarks: Strep-tag ${ }^{\circledR}$ (IBA GmbH).
